(Editorial in Ottawa Journal.)

THE enthusiasm and good will which have characterised the ture Government of the British Empire."
Col. Cooper pointed out how, under
the resolution adopted at the Imperial Treception of the Prince of Wales in the United States justifies War Conference of 1917, the British Dominions became practically separate entities of the Empire, hanceforth to meet with the mother country on common ground with equal authority and equal responsibilities, so far as the setthe best hopes of those who contend that little bickerings and differences to the contrary notwithstanding there pathy between the two great mem-bers of the Anglo-Saxon-Celtic fam-ily. There are those in the United equal responsibilities, so far as the set-thement of common problems was con-cerned. The idea that this new ar-rangement of things will result in the disintegration of the British Empire was refuted by the speaker, who cited the response of the Dominions in the war as an eloquent demonstration of his con-tention that it will only serve to make the Union stronger. He bespoke a closer cooperation between Canada and the United States and appealed for con-tinuation of the friendly relations which have long existed. ily. There are those in the United States who strive uncessingly to sow bitterness and distrust between England and America—their activities have hever been more notable than during the past few months—but taken as a whole the great heart of Columbia beats in unison with Britain. Their ideals, laws, language and institutions are the same, they are members of the same great races, and, in the last analysis, the call of the blood is there, and will remain despite all that some may do to ob-literate its ties. It is a splendid thing, a mightily potent thing, for the well being and the progress of the

If the act of 1910 caused the pulp and

owners realise that the cutting must be done systematically and wisely.

main on the ground; a nursery has been provided where over 3,000,000 forest trees are being grown for the reforestation of untilled lands and of denuded stands; an efficient protection system—the necessary cerollary of a wise law—has been organized for the protection of paper industry to make very remarkable progress the war has also greatly con-tributed to it. It is quite true that cerforests against fire. Such are the measures to which the Government has devoted all its attention and solicitude to assure the conservation, perennity and improvement of these vast forests. Under such conditions the lumber inas the obligation to keep in the country a certain proportion of the paper manu-factured and the fixing of a maximum dustry and trade could not but develop, rapidly. Thus, in 1901, according to the Dominion of Canada census, the total value of forest products was \$18,962,-043; in 1918 it rose to \$40,761,730.51. price per ton of paper—were far from being calculated to encourage this in-dustry. Fortunately, however, the war opened the great markets of the United States to us. The force of events made Out of this sum the figures for sawn lumber alone amount to \$13,685,740.27, or more than the total value of forest products in 1901. Canada replace Russis, Austria and Ger-many as an essential factor in the pulp

At present, while the European countries are striving to rise from their ruins, while pulp and paper are more and more in demand, the manufacturers of these two articles can count upon a great reserve of timber, upon numerous water falls capable of supplying an incalculate and assay to deiable amount of power and easy to de-velop, upon the most skilful labor to be had for lumbering operations and un-contaminated by Bolshevistic Utopian ideas upon the facilities offered for foating logs and loading their products, upon large and rapid rivers and advantageously situated deep water ports.

All these seem to me so many reasons

for which the province of Quebec is destined to become one of the most important centres in the world for the manufacture of pulp and paper. For the same reasons also capitalists will find it to their interest to invest their

many factories and sawmills, and thereby contribute to assure the material progress of the province. The Government derives a large yearly revenue from them, which is used in improving roads, in developing settlement and in aiding agriculture and education.

They contain a great many varieties of trees of uniform grain, owing to the climatic conditions prevailing in this part of Canada—trees whose wood can pulp, 374.894 tons of bisulphide pulp, in the capture of the whole Dominion. Thus, out of a money in an industry which is so remove their money in an industry which is so remove their money in an industry which is so remove the money in an industry which is so remove their money in an industry which is so remove their money in an industry which is so remove their money in an industry which is so remove their money in an industry which is so remove their money in an industry which is so remove their money in an industry which is so remove their money in an industry which is so remove their money in an industry which is so remove their money in an industry which is so remove their money in an industry which is so remove the money in an industry whi

by the 31 mills in the Dominion.

Such progress is due in a great measure to the passing, in 1910, of an act forbidding the exporting, in the raw state, of wood cut on crown lands under license. The result of this legislation was that capitalists were impelled to build pulp and paper mills in Quebec and manufacturers to enlarge their mills and improve their manufacturing processes. On the other hand it indirectly contributed to increase markedly the value of private forests and make their owners realise that the cutting must society, the Canadian Club and the Isociety.
